

# Winterwind 2017 Wrap-up

## Day 1: Field trip

Wind farm during icing event

Reindeer

STV – Scandinavian Track Vehicle

# Winterwind 2017 Wrap-up

## Numerical Prediction

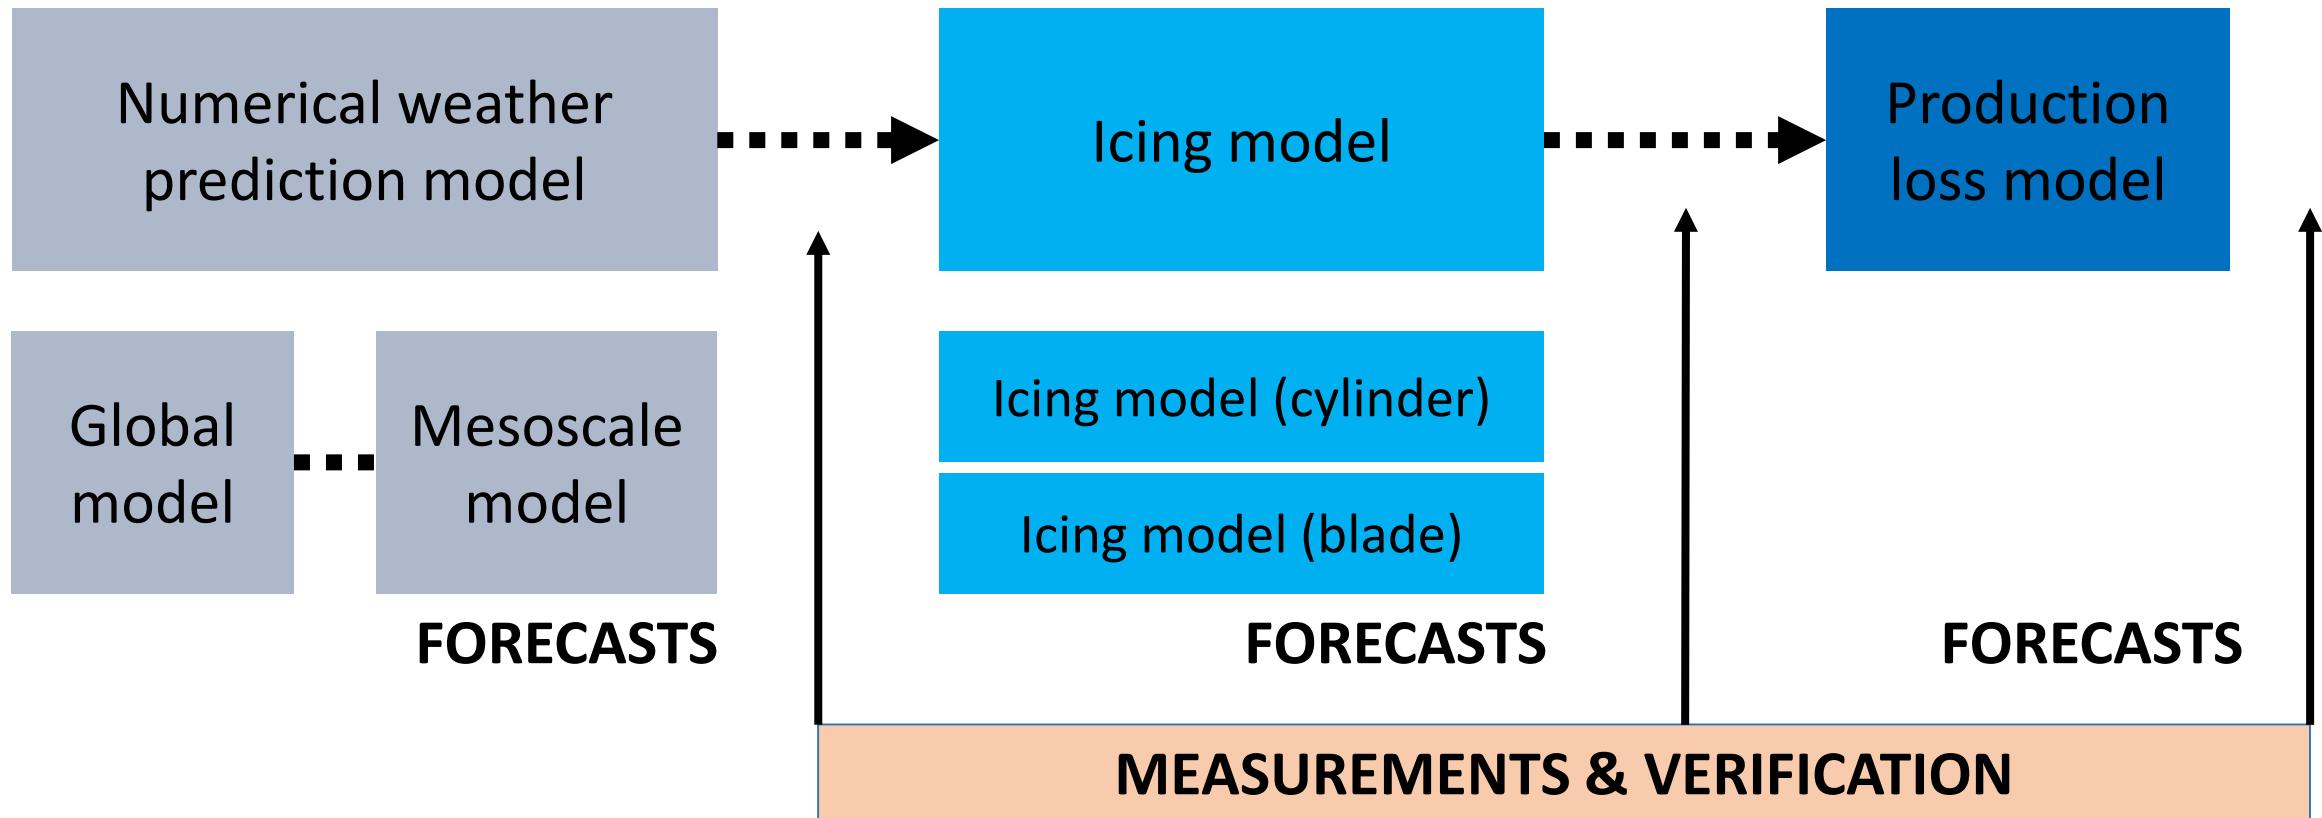

- Numerical weather prediction models
- Icing models
- Power models

## Weather Data Collection and Validation

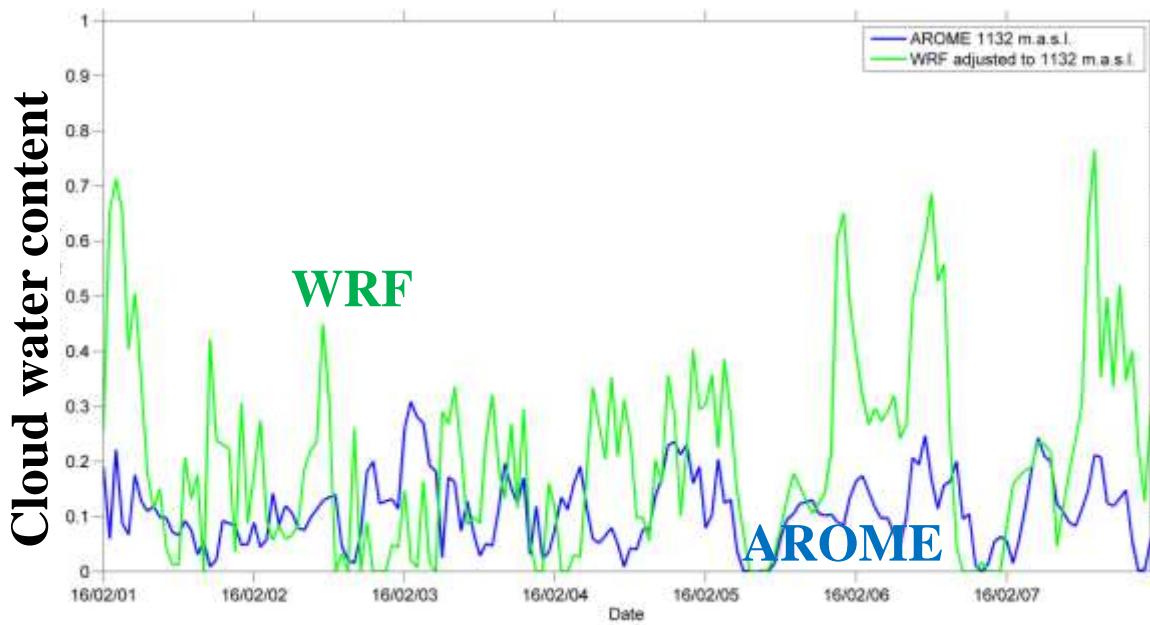

### Measurements / Sensors

# Winterwind 2017 Wrap-up

## “Modelling chain”

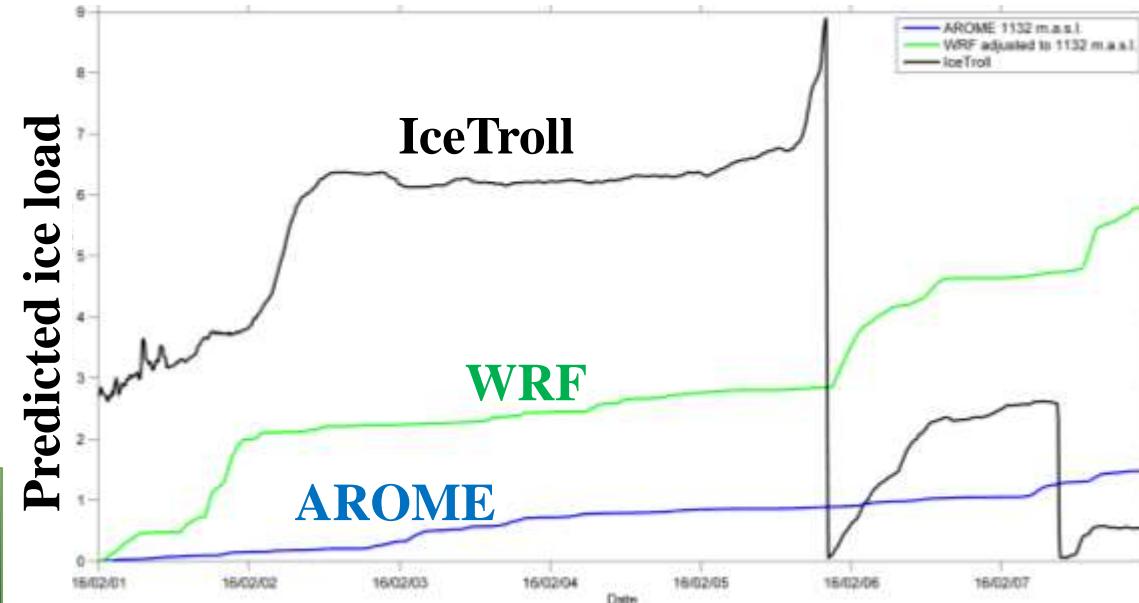

# WISLINE: AROME & WRF

Results courtesy  
KVT: Bjorn Egil Nygaard

One month: Feb2016

# Winterwind 2017 Wrap-up

## Icing data collection and validation

- Many problems with instruments in severe conditions
- Scientific projects help collect specialized data
  - WISLINE
  - FRontLINES
  - SNOWIE (Idaho, USA; now)
  - ICICLE (Great Lakes USA region; FAA funded; 2018-2019)
- Validation of NWP and icing models requires specialized observations
- Liquid water content (LWC) and droplet sizes

# Winterwind 2017 Wrap-up

## Ice accretion (modeling)

- Makkonen (2000) based on Finstad et al (1988) & Langmuir (1969)
- Standard cylinder icing
- Computational fluid dynamics
  - How to apply to turbine blades
- How to apply to POWER production

# Winterwind 2017 Wrap-up

## Measurements & Sensors

- Anemometers – various solutions
  - WISLINE
  - FRontLINES
  - SNOWIE (Idaho, USA; now)
  - ICICLE (Great Lakes USA region; FAA funded; 2018-2019)
- Icing sensors
- Liquid water content (LWC) and droplet sizes

Personal plea: Providing more data helps developers improve the models
