Platform Install

Boom Lift Install

Rope Install

INSTALLATION

NO OUTSIDE CONTRACTORS ARE USED

All Installations are carried out by GreenWIND Global's highly skilled installation team – no outside contractors are used. Installations are preferably carried out in OEM plants to keep costs low, and to ensure the highest quality possible is achieved. It is also possible to perform installations on site; on the ground, or in air on existing turbines without removal of the blades using platforms, boom lifts, and ropes.

After installation, GreenWIND Global representatives can be present to accompany the blade to the wind turbine site to ensure proper handling and care is taking place, and that no damage has occurred during the transport process.
