

THE NEXT GENERATION ICE DETECTION SYSTEM

Control System Integrated Software Solution for Substantial Cost Optimization

Carsten Ebert (Wölfel), Frank Bunge (ENERCON), Marc Reitmaier (Phoenix Contact), Bastian Ritter (Wölfel)

in all the second the second second

- 1. Motivation "Cut the Costs"
- 2. Field-proven Ice Detection System
- 3. Innovative Controller Integration
- 4. Realizable Cost Reduction Potential
- 5. Conclusions & Outlook

NEW BUSINESS MODELS AND PERFORMANT HARDWARE

Why do we drive this innovation process?

Industry trend to eliminate number of third party systems and interfaces (whenever possible) to drop LCoE

New business models put the emphasis increasingly on the data analysis and data mining

Availability of highly-performant industrial PCs based on PLCnext technology are the technological backbone

Multiple CPU cores usable to separate WTG control and SHM functionalities safely and with allocable resources

CPU = Central Processing Unit LCoE = Levelized Cost of Energy WTG = Wind Turbine Generator SHM = Structural Health Monitoring

COLLABORATION DRIVES INNOVATION PROCESS

Phoenix Contact and Wölfel partner up for holistic SHM

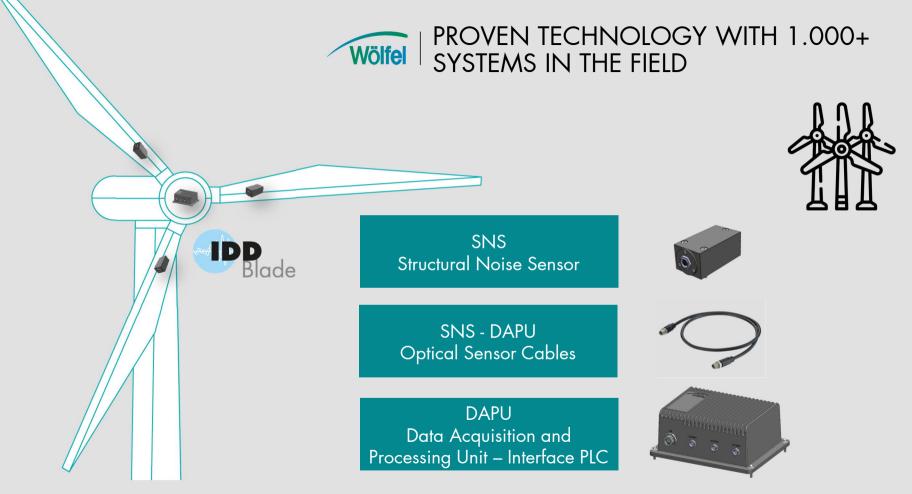

- Driven by technology advancement and possibilities for cost reduction
- Wölfel brings in in depth structural health monitoring data analysis knowledge
- Phoenix Contact has expertise in lightning, drivetrain monitoring and grid modules
- → Outcome: One system for all requirements

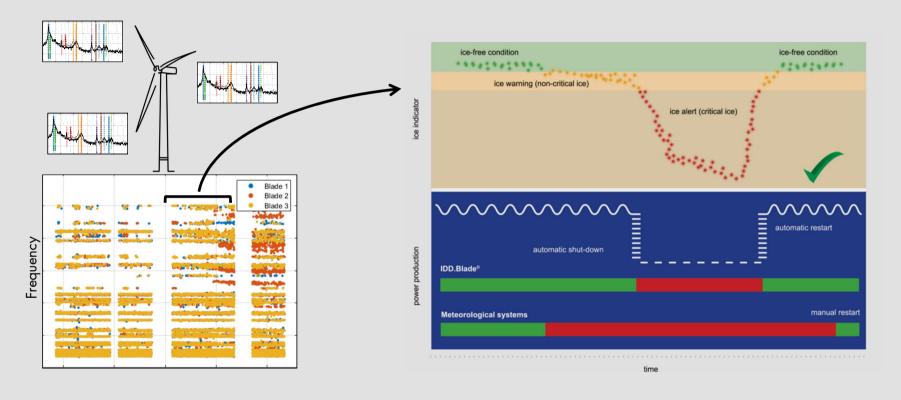

Wölfel CONTENTS

- 1. Motivation "Cut the Costs"
- 2. Field-proven Ice Detection System
- 3. Innovative Controller Integration
- 4. Realizable Cost Reduction Potential
- 5. Conclusions & Outlook

Wölfel TEMPORAL ANOMALIES INDICATE ICE ACCRETION

- 1. Motivation "Cut the Costs"
- 2. Field-proven Ice Detection System
- 3. Innovative Controller Integration
- 4. Realizable Cost Reduction Potential
- 5. Conclusions & Outlook

INNOVATIVE PLATFORM-INTEGRATED CONTROL SYSTEM

- ENERCON develops a new control systems for more efficient and cost effective turbines
- The heart is one central industrial controller for the power plant with more than sufficient computational resources
- Phoenix Contact provides PLCnext BoxPC and sensor hardware, integration of control algorithms
- Advanced software use the standardised interface and accesses directly the turbine data
- Wölfel software evaluates the data and outputs the critical KPI indicators for rotor blade icing and damages

WÖLFEL APPLICATION IS A MODULE IN THE NEW PLATFORM INTEGRATED CONTROL SYSTEM OF ENERCON

System architecture of the new ice detection device includes

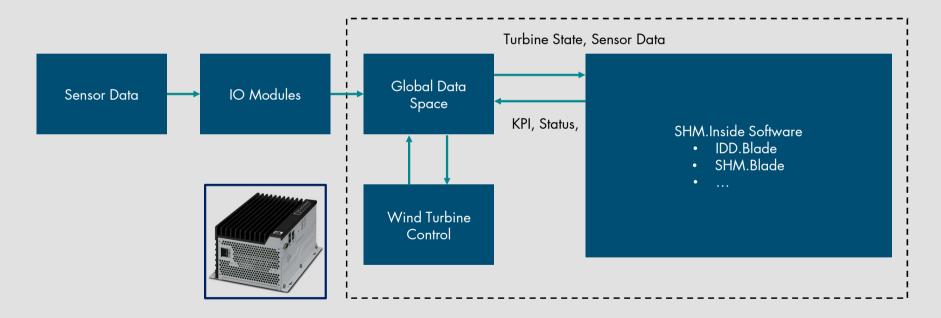

- the standard components
- and additional components for ice detection with IDD.Blade
- → This is the conceptual design to detect reliably ice accretion

ARCHITECTURE TO FIT THE NEEDS OF OEM & OPERATORS

Communication and processing with software container

Wölfel

TIMELY FINALIZED IN ONE YEAR DEVELOPMENT

1. Proof of Concept

2. Prototype Software

Initial acid stress test, pushes the PLCnext to its limits in order to know them

 ✓ Prototype software shows decent performance on BPC target

Wölfel

TIMELY FINALIZED IN ONE YEAR DEVELOPMENT

3. Product Software

4. Certified Software

✓ IDD.Blade successfully certified by DNVGL as next generation ice detection system (01/2023) ✓ Ice detection functionality fully integrated into software architecture

Wölfel CUTTING EDGE TECHNOLOGY BRINGS ADDED VALUE

- Fully integrated software container with advanced SHM functionality
- Performant hardware is deliberately restricted to use only one CPU core
- Certification process successfully completed
- Roll-out in first turbines
- Solution is available for the following turbine types:
 - E-138 EP3 E3 → 2023
 - E-115 EP3 E4 → 2023
 - E-160 EP5 E3 R1 → 2023/24

Wölfel CONTENTS

- 1. Motivation "Cut the Costs"
- 2. Field-proven Ice Detection System
- 3. Innovative Controller Integration
- 4. Realizable Cost Reduction Potential
- 5. Conclusions & Outlook

Wölfel | TWO CASE SCENARIOS

1. Classical ice detection systems

- 1x Data Processing Unit (Cabinet)
- 1x Interface Connection to the WTG
- 3x Structural Noise Sensor (SNS)
- 3x Sensor Cable
- Software + License
- Advanced communication protocol (etc. Modbus)
- Service and spare parts

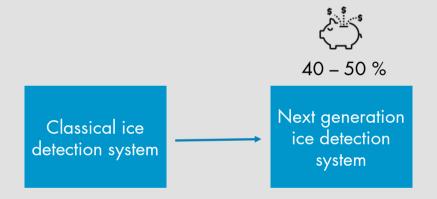

2. Next generation ice detection system

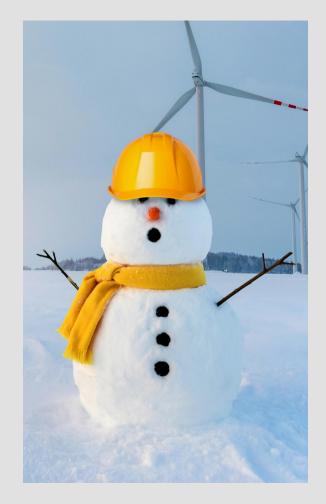

- 3x Structural Noise Sensor (SNS)
- 3x Sensor Cable
- Software + License
- Simple communication via global data space

COST OPTIMIZATION COMPARED TO TODAY'S ICE DETECTION

- Substantial drop in costs for the ice detection system
- Plus additional savings due to
 - reduced maintenance costs
 - less hardware-related costs
 - reduced costs for device and patch management (software updates)
 - increased revenues "after sales" (simpler retrofit solution)

Wölfel | CONTENTS

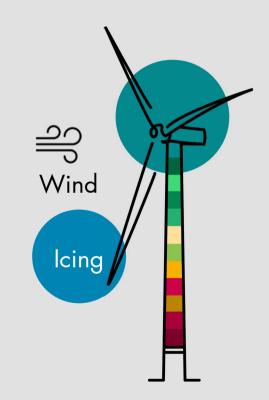

- 1. Motivation "Cut the Costs"
- 2. Field-proven Ice Detection System
- 3. Innovative Controller Integration
- 4. Realizable Cost Reduction Potential
- 5. Conclusions & Outlook

THIS BRINGS DOWN THE COSTS ... SUBSTANTIALLY

Final conclusions:

- Direct integration in control hardware eliminates the need for separate data processing unit
- This leads to reduced efforts for installation, maintenance, spare parts and documentation
- And to increased IT security due to lack of communication protocols between third party systems
- Easily maintainable software through firmware and software updates on a regular basis
- → Summarized this is the next generation ice detection system

Wölfel THANK YOU FOR YOUR INTEREST
